

1) Molly, the cat, is scratching and biting her fur. "I feel so itchy," she tells Bear. "No matter how much I scratch, the itching won't stop!"

What do you think is wrong with Molly?

2) Jake, the dog, has a lump on his ear with a tiny black center. Can you guess what it is?

3) Amy loves to walk her puppy Patches, until she notices mosquitoes buzzing around them. Amy is worried that the mosquitoes will bite her puppy.

What do mosquitoes carry that could hurt Patches?

A) Fleas
Flea bites are painful and can hurt our pets.

B) Ticks
Ticks bite dogs and cats and suck their blood. They can carry diseases that make our pets sick.

C) Heart-worms
Mosquitoes can leave eggs under a pet's fur and skin that grow into heart-worms. These heart-worms live in the heart, lungs and blood vessels, causing our pets to become seriously ill.

Did you find the right answers? Great!

Also, did you know that veterinarians have special medicine to make sure fleas, ticks and mosquitoes don't hurt your dog or cat? Talk to an adult or vet about how you can protect your furry friends.
